

ONE CLOUD SERVICE

**Virtual Desktop Managed
Service**

- Manage costs by reducing the number of online servers during the off-peak hours.
- Centrally managed user workspaces allows consistent desktop experiences with all users. It allows simpler management of security updates and auditing.
- To improve performance and cost effectiveness the VDI environment scales to your demand.
- Traditional pooled VDI environments used Windows Server as the operating system. However, we use Windows 10 which allows are more recognisable experience for your users.
- Virtual Desktop facilitates remote access to your files at any given point in time. This increases the efficiency of staff. For one, they are more flexible.

CONNECT FROM ANYWHERE

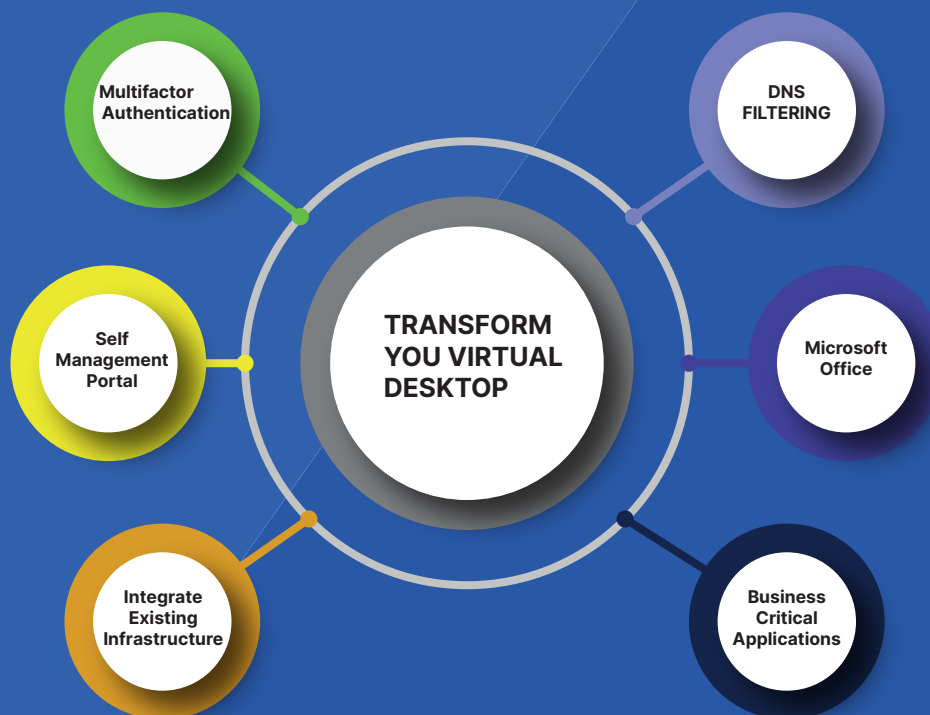

Connect to Virtual Desktops from any place in the world with an internet connection and from any device. This allows you to have easy access to a centralised desktop.

Have your Virtual Desktop located across the globe to minimise latency

EVOLVE YOUR VIRTUAL DESKTOP

Extend your Virtual Desktop environment by integrating it with additional services

- Additional security measures with Multifactor Authentication. Keep those prying eyes away from your company data.
- Self Manage your Virtual Desktop environment with our custom portal
- Limit what your users can access by enabling DNS Filtering.

- Link your existing infrastructure such as File Shares into your Virtual Desktop. Manage your users with traditional Group Policy or migrate to Azure Active Directory Domain Services.
- Virtual Desktop seamlessly integrates with Office 365
- Install any Business Critical Applications and have it highly available to your end users
